Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues (page 12) that gradation technology, as taught by Yagi, is for the purpose of area modulation and not for implementing gradation in the height direction. Examiner responds that it is not clear where this is stated in Yagi. With respect to claim 3, Yagi teaches (abstract) that the ink melts (during fixation) and this melting suggests that particles in the ink are thermoplastic in nature. With respect to claims 10-12, Yagi teaches controlling the amount of material added to an object (during lamination) by using gradation technology, which involves adjusting the degree of irregularities (e.g., surface features of the object, due to height differences or undulations) in the object and adjusting the amount of material added to the object .
